

CIST1300-001 Assignment 1

Due Date- 10/3/2018

Points- 50

Objective- This assignment expects you to create 1 web-page using HTML and CSS.

1. Now that we are familiar with Git and gitlab, in your local workstation create a folder named “Assignment1” no space between the word Assignment and 1.
2. In the Assignment1 folder please create an index.html page.
3. Please see the screenshot below-

I want everyone to redesign the webpage. You can use different pic, however the content needs to be organized. Please re-design the webpage and make it user friendly and responsive.

If you want to refer the website, please refer -

<https://dryiceinfo.com/>

4. Please use the necessary HTML elements such as menu, links, and various text formatting elements to make the website content organized.
5. Please use CSS styling to style your website. You can use inline, or external which ever you prefer.
6. This lab involves you to be creative, you have the content already. All you need is to design the webpage to be responsive and mobile-friendly.
7. In side you can see various links, you can keep those links, however source for those links can be pointed to index page only.
8. Develop locally, once ready after testing, push to git and loki.

Grading Rubric :-

Design	10
